

THE POWER OF ONE

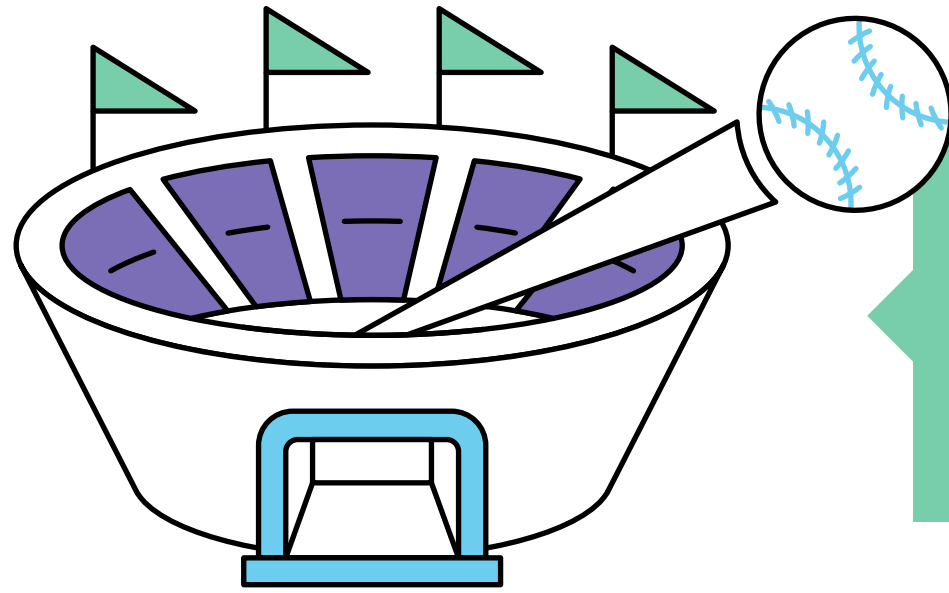

HOW MANY PATIENTS DOES A NURSE TREAT?

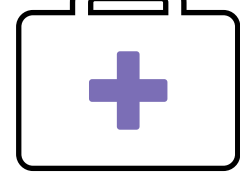

One nurse treats an average of **1,512 patients a year**^[i].
The average nursing career lasts **19 years**^[ii].

$$1,512 \times 19 = 28,728$$

Patients Per Year Year Career Patients Treated

That's enough people to almost completely fill up an entire **MLB STADIUM!**

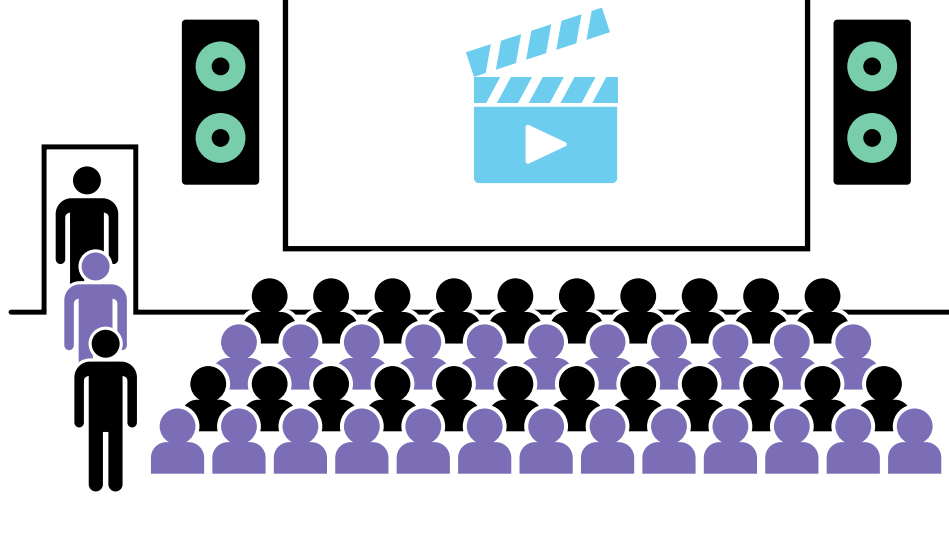

HOW MANY LIVES SAVED?

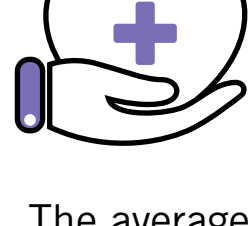

The average nurse saves **5.5 people per 1000**^[iii] patients treated, and since a nurse treats 28,728 patients over the course of their career, that means:

$$28,728 \times 5.5 \div 1,000 = 158$$

Patients Treated Patients Saved Patients Treated Lives Saved

That's enough lives saved to **FILL EVERY SEAT IN A MOVIE THEATER PLUS A LINE OF PEOPLE COMING OUT THE DOOR!**

HOW MANY LIVES TOUCHED?

The average person has **150 Friends**

The average person is close to **25 Colleagues**

The average person will have **14 Family Members**

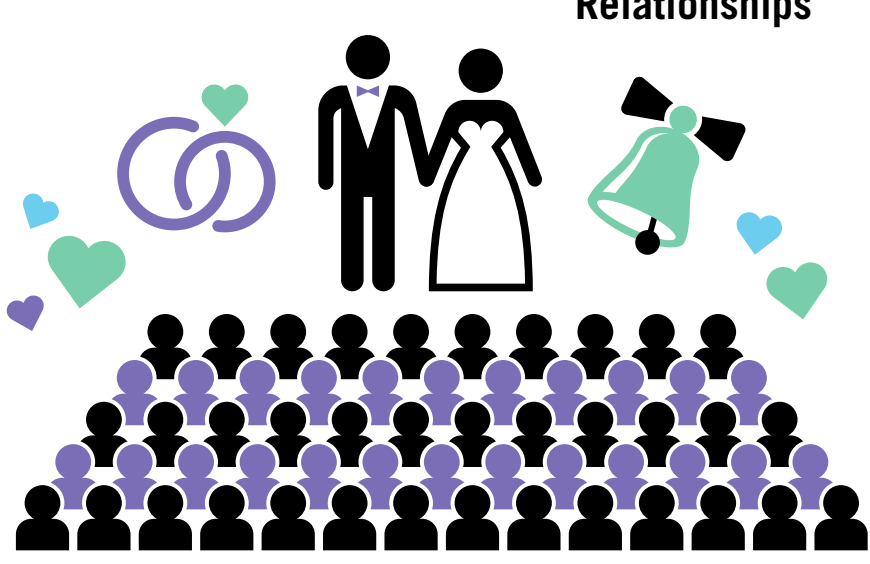

This is known as **DUNBAR'S NUMBER**: The number of people you wouldn't feel embarrassed about joining uninvited for a drink if you happened to bump into them at a social event.

Over the course of your career, regardless if you come from a small business or a Walmart-sized corporation, you'll develop meaningful relationships with **25 people**.

The average person has **2 children**.
The average childbearing age in the U.S. is **25.3**.
That means you will see **3 generations**.

All of these add up to **189** in a person's entire life.

Meaningful Relationships

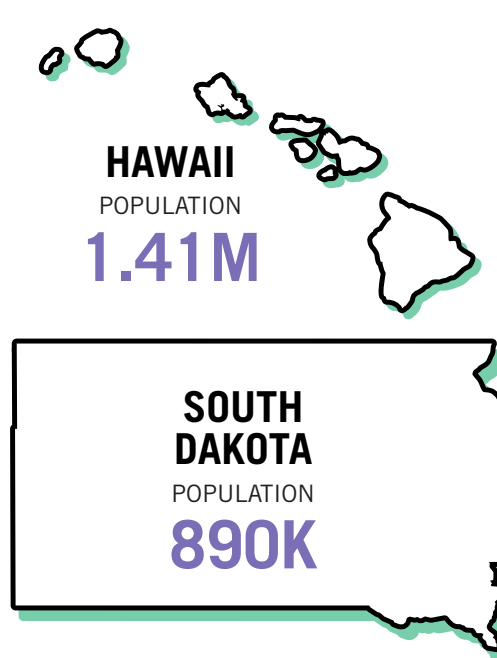

That's 1.5 times larger than the average **WEDDING!**

So, if we take the **number of patients a nurse will treat** in their career and the **number of meaningful relationships each patient will have** in their life, a nurse has the power to both directly and indirectly affect:

$$28,728 \times 189 = 5,429,592$$

Patients Treated Meaningful Relationships Lives Affected

That's like having an impact on every single person from **HAWAII, NEVADA, and SOUTH DAKOTA COMBINED!**

Want to change the world?
You have more power than you think.

THE POWER OF ONE *Nurse!*
